

CFSG | China Fire & Security | Profile | Summary

CFSG - China Fire & Security Group, is a leading total solution provider of industrial fire protection systems in China. Due to a little softness in the Iron and Steel sector in China, the company reported disappointing numbers in the last quarter, and the stock plunged to a 52WK lows. We believe this could be an opportunity for investors with a long term perspective.

CFSG could leverage its proprietary technology and broad product portfolio to expand and gain back the market share, provided the economic outlook for the rest of the year and beyond doesn't deteriorate further.

The Company owns a comprehensive portfolio of patents covering fire detection, system control and fire extinguishing technologies, and via its nationwide direct sales force, has built a solid client base including major companies in iron and steel, power, petrochemical and transportation industries throughout China.
